April 11, 2022

The Honorable Chris Jacobs  
Member of Congress  
House of Representatives  
Washington, DC 20510

Dear Congressman Jacobs:

Pursuant to the Senate Appropriations Committee’s Community Project Funding process, the New York State Division of Homeland Security and Emergency Services, can affirm Livingston County Emergency Operations Center (EOC) project meets eligibility requirements under the Emergency Operations Center (EOC) Grant Program and the project is able to be funded within the Fiscal Year 2023 Community Project Funding.

The project sponsor is responsible for demonstrating other non-federal matching requirements.

Sincerely,

Eric Abramson  
Director  
Grants Program Administration
April 15, 2022

The Honorable Chris Jacobs  
United States House of Representatives  
214 Cannon House Office Building  
Washington, DC 20515

Dear Congressman Jacobs:

On behalf of the Rochester Genesee Regional Transportation Authority (RGRTA), I write to express our strong support for Livingston County’s FY 2023 Congressionally Directed Spending request for the Resilient Microgrid project through the Emergency Operations Center (EOC) Grant Program. The County’s $250,000 request will allow for the hardening and increased resiliency, from an energy perspective, of its EOC at the Hampton Corners Complex in the Town of Groveland.

The EOC is considered critical infrastructure, due to its central role as a hub for crisis communications during emergencies. The building also houses a back-up 911 Emergency Communications Center and a training center for local fire departments and emergency responders. This project will involve the design and construction of a solar array and on-site battery storage that will provide green, auxiliary power to the EOC in the case of an emergency. Additionally, fuel lines will be tied into the EOC to provide an on-demand energy supply to back-up generators. With RGRTA’s Livingston County facility located at the Hampton Corner’s Complex along with the EOC, this project will allow for more reliable communication in the event of an emergency and improved resiliency for our local operation.

The community benefit of this Resilient Microgrid project will be a more reliable facility that focuses on safety and sustainability under a variety of conditions. A safer facility will lead to a safer public in the event of an emergency.

We are confident that Livingston County will successfully complete this project and meet all necessary program requirements.

Thank you for your consideration. Please feel free to contact me if you have any questions.

Sincerely,

Bill Carpenter, CEO
